INX InControl and INX InControl Mobile

5.10	5.11	5.12	5.13	5.14	5.15	5.16
Other product improvements include: • *Defects addressed within the event and restricted events* • *Defects addressed within administration functions* • *Defects addressed with notifications and actions* • *Fix applied to duplicate items appearing in registers with multiple owners* • *Fix applied to viewing some risk assessments in risk reviews when 'ShowRiskProcess' app setting is turned off* • *Fix applied where the work status field on an injury record was mandatory on creation but not on edit* • *Fix applied to calculating the severity rate when the effective date of an injury was in a different time period to the date of the event* • *Improvement to People Search screen loading time* • *Fix applied to workgroup selector not displaying correctly if the logged-in user had an apostrophe in their username* • *Fix applied where a person profile could not be deleted if it had been added as a supervisor on any other profiles* • *Fix applied to filter settings in ad-hoc reports could be altered by database maintenance routines* **Notifications updates** *From Version 5.9 onwards, notification emails are sent individually to each recipient rather than as a single email with multiple addresses.* *This change ensures that a send failure to one account does not prevent the email from being sent to other recipients and allows individual logging of email success and failure messages.*	**Send immediate notifications for actions created in events, scheduled events and checklists** *Notifications can now be sent immediately for actions created in events, scheduled events and checklists.* *If a responsible person has been assigned and a due date has been set.* **Configure default workflows on the Workflow Administration page** *Default workflows can now be configured on the workflow administration page to ensure a valid workflow will always be available for a submitted event.* *The default workflow cannot be made inactive.* **View transition data in workflows** *Additional protection has been added to prevent malicious file uploads in the following locations:* • *Event documents* • *Scheduled Event documents* • *Injury documents* • *Action Attachments* • *Event Checklist documents* • *Register Item documents* • *Person profile documents* **Workflow Summary Information** *All users who have access to view an event report can now view the workflow transition data by hovering over the workflow step breadcrumbs.*	**New fields added to ad-hoc, actions & ad-hoc, and event reports.** *A fix has been made on Ad-hoc Reports > Actions. Previously, the Ad-hoc Report only included Actions raised on an Event whose Workflow had an ERM assigned.* *This has been resolved and now all Actions will display in the Ad-hoc Report regardless of Event Status or Workflow.* **Product performance, security and usability improvements** *Security-related bug fixes:* • *Added security to username, user ID and email address* • *Added security to security role (account role reader has been updated)* • *Added extra HTTP security headers to protect from malicious attacks* **Other product improvements include:** • *Events can no longer be closed without all Approvers approving the Event* • *Events are displayed "Currently in Approval" until all approvers approve the event* • *Action conditions can be added successfully through the checklist action tab* • *A fix has been made to stop the app settings resetting to default value* • *A fix has been made on Event Actions.The 'click to view attachments' hyperlink was not working when there were multiple Actions on the Tab*	**Product bug fixes and improvements include:** • *People actions tab is displaying all actions* • *Event reports: long description is limited to 2,000 characters* • *System administrator can edit findings tab of Closed Event* • *Event Action notifications are being generated when they should be Event Report notifications* • *Event notifications are being generated with empty actions* • *Special characters not being decoded/displayed correct on read-only Event details page*	**No new features or bugs introduced in Version 5.14 release for INX InControl.**	**Actions dashboard** *All users of the web application that have been assigned actions can now view them in one place on the landing page.* **Ability to define Checklists at company level** *Give administrators the ability to re-use checklists at the company level as well as define specific checklists for workgroups.* **Ability to make Responsible Organisation mandatory** *Give administrators the flexibility of making the responsible organisation mandatory when reporting an event per event type.* **Remove Reported Elsewhere fields from Event Report page** *Give administrators the flexibility of removing the Reported Elsewhere field when reporting an event.* **Remove Reported Elsewhere fields from the Exposure page and Reports** *Give administrators the ability to remove the Reported Elsewhere fields from the Exposure page and Reporting.* *The Exposure page has a checkbox per line item to include events Reported Elsewhere.* **Other product improvements include:** • *Stability improvements* • *Injury management SSO* • *Refreshing the InTray* • *Event Summary report to show the correct ReportedBy name*	**INX Sitepass integration with INX InFlight and INX InControl** *Centralise the management of your workforce and ensure information is consistent across your business platforms by integrating the profiles of your connected contractors, team members, and visitors in INX Sitepass with INX InControl and INX InFlight.* **Other product improvements include:** • *Inactive workgroups no longer default when submitting an event report* • *Create new event reports when risk consequence codes do not have a description* • *Workgroup sequencing in Company Level selector now consistently uses the sequence in Workgroup Details* • *Reporting service cleans up temporary files correctly*

Protecting people & planet

INX InFlight and INX InFlight Mobile

5.10	5.11	5.12	5.13	5.14	5.15	5.16
Telstra SMS provider integration	**Manage several accommodation types across multiple sites with Accommodation Planning**	**Journey reschedule**	**Set future time period to individual's access to workgroup**	No new features or bugs introduced in 5.14 release for INX InFlight.	**INX InFlight Mobile 2.0 release**	**INX Sitepass integration with INX InControl and INX InFlight**

5.10

Telstra SMS provider integration
The first phase of this functionality allows you to send messages via the Telstra SMS service.

Send SMS messages to any or all passengers
Once SMS sending is configured, users can simply go to the Flight Bookings tab and select any or all of the passengers they wish to send a notification to, and select Send Notification.

Set traveller's preferred contact method
A new setting has been added to Personal Details which will allow users to define how a traveller wants to receive notifications.

Choose list of recipients and edit body of email in Flight Bookings tab
The existing ability to send emails to individual travellers from the Flight Bookings tab has been improved so users can choose a list of recipients and edit the body of the email within the system before sending.

Notification Status
A new Notification Status icon, visible on the flight bookings tab, shows status of when and how a passenger on a flight has been notified.

Product bug fixes and improvements include:
- *Select booked flights from any date*
- *Include the flight time in Evacuation Report*
- *Update to ad-hoc reports displaying on flight manifest*
- *Updates to cleaning calendar*
- *Update commercial travel to exclude date of birth as a mandatory field*
- *Scheduler maintenance*
- *Updates to booking groups*

5.11

Manage several accommodation types across multiple sites with Accommodation Planning
You can manage a wide variety of accommodation types that may be distributed across multiple locations.

Accommodation Planning enables managers and planners to enter staffing, roster and room requirements for upcoming projects and visualise whether there will be accommodation available at that time.

Planning considers the current staffing requirements (baseline) and proposed projects to compare accommodation supply with demand and highlight future shortfall.

Once forecast demand has been secured, short term bookings can be made directly from the plan.

Product bug fixes and improvements include:
- *Default page sizes do not revert on upgrades*
- *Sort Person Profile attachments by date*
- *Updates to accommodation no-show report*
- *Updates to visibility of current person workgroup on check-in/check-out page*
- *Cleaning rosters are now set to build if configured to be over the R&R period*

5.12

Journey reschedule
With this new feature, rebooking the entire journey for an individual or a group takes less than 30 seconds, down from 25-minutes and saving significant administration time.

Product bug fixes and improvements include:
- *Select booked flights from any date*
- *Updates to 'other flight required' issue where a person can be booked on a flight that does not relate to home to work (or vice versa)*
- *Updated SMS functionality where the System will automatically reprovision the account with Telstra.*
- *Once a person has been marked as checked-out/ checked-in, you can now mark them as a non-departure*

5.13

Set future time period to individual's access to workgroup
This updated functionality enables the administrator to set a future time period to an individual's access to a Workgroup for example: 0 = immediate effect, 1 = today + 1 month, 2 = today + 2 months

Manage meal requirements
A new administration page to manage meal requirements has been developed, which can be set with a Rate Type, Rate Code or applied against the Work Status Code.

This can be turned on as required; please contact Support for further information.

Cleaning comments displayed on cleaning calendar and schedule
Cleaning comments will be displayed on the Cleaning Calendar and Schedule, with a triangle to indicate when a comment has been made. The source of a cleaning scheduled can be clearly identified.

The schedule could be created from one of the following sources: cleaning roster on the room, cleaning roster mapped to the person, A combination of the two mentioned above, Multiple cleaning rosters mapped together.

Product bug fixes and improvements include:
- *For a complete list of bug fixes in Version 5.13, see the full version of our release notes.*

5.14

No new features or bugs introduced in 5.14 release for INX InFlight.

5.15

INX InFlight Mobile 2.0 release
Our new mobile application now has simplified, more secure, access management, updated itinerary, travel information, and personal information for each user.

Sensitive fields
This new feature enables the Administrator to configure certain fields, including custom fields, to be marked as 'sensitive'.

This will result in these configured sensitive fields to be hidden from view on the Person Profile for Non-Admin users. This feature also extends to Reports.

Other worksite field in room bookings page
This field was previously available within ad-hoc bookings only and has now been added to the 'Room Bookings' page.

It will be visible in multi-site environments only, and a faster experience in keeping accommodation booking information up to date.

Product bug fixes and improvements include:
- *Auto build*
- *Fails in flight reschedules*
- *Incorrect information between flight manifest and flight calendar*
- *Admin Passenger Manifest output was disabling Booking Preference*
- *Group Maintenance update*

5.16

INX Sitepass integration with INX InControl and INX InFlight
Centralise the management of your workforce and ensure information is consistent across your business platforms by integrating the profiles of your connected contractors, team members, and visitors with our INX Sitepass integration with INX InFlight and INX InControl.

Integration with INX +Advanced Cleaning
Since every worker needs a clean room, clean towels and fresh linen, and companies need changeovers to be efficient and seamless, we have introduced an integration with INX +Advanced Cleaning to provide real-time support in the field.

Product bug fixes and improvements include:
- *Fix to cache in Site Entry Requirements settings*
- *Fix to time zones in the Rooms Required page*
- *Fix to display in Room Details*
- *Fix to profile duplication in Serko integration*
- *Fix to autobuilding flights*
- *Fix to rescheduling flights feature*
- *Updates to Camp Administrator*
- *Improved Flight Calendar page performance*
- *Improved People Search page performance*
- *Fix to paging in People Search page*
- *Improved performance of configurable maximum page count - Person Search and Group Maintenance*
- *Improved performance of Room Booking page for ad-hoc bookings*

Protecting people & planet

INX InForm

6.0	6.1	6.2	6.3
New features • New dashboards and reporting tool • Bulk editing of task schedules • Drag and drop documents • Improved user interface design • Works in more browsers, including Google Chrome • Product security improvements	**New features** • *The ellipsis in the Registers will now display the document count* • *Improvements have been made to the Task Scheduler* • *Enhanced filtering capabilities have been enabled in the Communications Register and on several Standard Reports* **Home page improvements** • *Updates to the Task Overdue Counter* • *Dashboard is now click through* • *New 'My In Tray' for users to manage their Tasks* • *Ability to upload Site Logo(s) for use in reports* • *Additional custom data field types such as checkbox, large text and multi-select.* **Performance enhancements and bug fixes** • *Tasks: Including a due date is mandatory to validate* • *Task verifier is now displayed* • *Update to 'Field Types' in: Condition Summary Report and Obligation Summary Report* • *Update to 'Add Site Filter' in Complaints report* • *Task Changes report* • *Events-Conditions report* • *Obligation Status report* • *Conditions Non-Conformances report* • *Stakeholder gender has been amended to a pre-defined list* • *Improved performance to Conditions* • *Improve performance for fetching Conditions* • *Tooltip displaying for conditions* • *Target date and date custom fields created*	**Logging** *We have introduced a new functionality that will record all logs and actions done in INX InForm. You can log all issues and bugs happening in the system, allowing us to provide better support and resolve issues quicker.* **SSO Capability** *Single Sign On (SSO) using the Auth0 platform is available.* **Window Services improvements** *We have improved the Windows Services to ensure that, in the case of an issue with the service, they will automatically restart and continue to function correctly.* **Migration reliability improvements** *We have updated the migration process. The software will ensure user migration only occurs once and better handle migration failures.* **Security improvements** *We have added and improved security around the API.* *Note: A requirement exists for SSL certificates (self-signed ok), even for Test environments.*	**Bulk actions to reassign ownership and responsibility** *Bulk action capabilities across obligations and tasks.* **Conditions: Added site filter to the home screen** *We have added a new option to the top of the dashboard that allows you to filter statistics based on the site or sites they select. With this new option, you can now view specific metrics tailored to your business operation or organisational site.* **Dashboard: Added a "Records with inactive users" pane** *A new dashboard pane has been added to make it even easier for compliance managers to stay on top of their obligations and tasks. This improvement will enable users to quickly identify any obligations or tasks that are assigned to inactive users.* **Conditions: Obligation-Condition conformance improvements** *This improvement allows Conditions to be tagged as conformant, regardless of whether any current or historical tasks are overdue. This enhancement enables you to assess conformance independently and provides you with greater flexibility in managing their data.* **Tasks: Cloning a task to save time** *You can now clone existing tasks, making it easier and more efficient to create new tasks that are the same. This allows the user to replicate the main task details, linked topics, conditions, stakeholders and communications under the relationships tab with just a few clicks.* **Tasks: Configurable overdue task notification reminder emails** *You will now have better control over how often they receive overdue task notification emails, so you are not inundated with notifications for low-priority tasks. This new administrative option will allow you to focus on the most important tasks.* **Communications: In context configuration of stakeholders** *You can now create new individual and group stakeholders seamlessly while adding a new communication record. You will no longer have to worry about abandoning your work halfway through.* **Reports: A new communication report is available** *We have added a new Communication report to our list of standard reports, which will provide you with a comprehensive overview of all Communications received during your specified period.* **Reports: Major review of the Task Calendar report** *The Task Calendar report has undergone some major improvements to make it even more user-friendly and complete. You can now easily extract and view a clean calendar of tasks to complete, making it easier to review and stay organised (e.g. on a cubicle wall).*

Protecting people & planet

			Reports: Overhaul of all INX InForm standard reports *We have implemented various formatting improvements across all reports, including standardising the UTC conversion code to ensure that dates and times are displayed relevant to your time zone (where appropriate).*

INX InHealth

5.10	5.11	5.12	5.13	5.14	5.15	5.16
No new features or bug fixes introduced in 5.10 release for INX InHealth.	Other product improvements include: *INX InHealth Version 5.11 updates resolves security vulnerabilities.*	No new features or bug fixes introduced in 5.12 release for INX InHealth.	**Product bug fixes and improvements include:** • *Microsoft Katana component for Open Web Interface has been upgraded to resolve security vulnerabilities* • *Increased decimal precision of Sample Values* • *Updated Telerik framework to latest version (UI for ASP.NET AJAX 2020 library), inheriting a host of improvements available within the latest release*	**Security improvements** • *Restrict users to their own site regardless of administrative privileges.* • *Added security detection to Ad-hoc Reports and Ad-hoc Report Types to ensure only users have appropriate permissions.* • *Added the ability to view the Hygiene Sampling calendar as part of the Occupational Hygiene role permission.* • *Hashed out the Person Name field in the Exceedances tab of the Similar Exposure Group (SEG) Details screen when a user has access to the SEG Register but does not have either Clinic Register or Occupational Hygiene permissions.* • *Improved security by removing the ability for a user with Administration privileges to elevate their own security permissions.* • *Ensured the alert icon is not displayed on person medical conditions or medications tabs in Person Details if the user does not have the necessary security granted.* • *Removed ability to see people unallocated to a SEG on the Clinic Overview page if the user only has Clinic Overview permissions and lacks Occupational Hygiene and/or SEG Register permissions.* **Clinic improvements** • *New panel on the Home screen that shows recent (last 30 days) and upcoming (90 days) requested and booked consultations and allows the user to edit Requested appointments.* • *New Request Booking button on the Home screen, allowing general INX users to request bookings without a specific security role assigned.* • *Enabled editing of the Consultation date-time and Assessment Type during the Consultation, so adjustments can be made in real-time.* • *Added ability to place 'Next Date' for clinic visits including visibility of roster particulars.* • *Implemented optional [Save and Next] button on the Evaluations tab of a Consultation to improve user experience navigating through multiple evaluations.* • *Deleting a Consultation previously required many fields to be cleared first. This has been improved so only attached data needs to be removed, making it easier to delete test Consultations and Consultations that have only just started. Completed Evaluations will stop block Consultations from being deleted, which will be addressed in the future.* • *Added ability to link Compliances to Health Monitoring Tests that automatically flow through to INX InTuition, including add a checkbox as the compliance trigger.* • *Changed compliance date from Consultations to be based on the Booking date rather than Close Out date, to account for situations where the Close Out might not occur for some time after the consultation.* • *Fix applied to blank document being downloaded on the Evaluations tab of a Consultation prior to navigating to a different tab and implemented save check.* **Hygiene improvements** • *Added error checking of mandatory Roster details within Sampling Events. Without roster details, adjustments do not calculate correctly.* • *Miscellaneous improvements around SEGs including improvements to the SEG Register grid and search options as well as adding the SEG Code to the SEG Name in any place where the Code is not already displayed.* • *Added options to filter by and highlight exceedances within the Hygiene Data Viewer.* • *New improvements to the Hygiene Data Viewer display, including number/text alignment and handling of large and special characters.* • *Enhanced Sample Events so that void samples do not prevent the Sample Event from being closed out where the number of valid samples is less than the minimum sample size.*	No new features or bug fixes introduced in 5.15 release for INX InHealth.	No new features or bug fixes introduced in 5.16 release for INX InHealth.

				• *Added colour contrast logic to the Data tab in the Sample Event Details to ensure readability of text based on the background highlight colour as specified in the Administration area.* • *Fixed tooltip size in Sample Events that rendered the tooltip unreadable.* **Miscellaneous bug fixes** • *New ability to drag and drop documents and attachments into the browser instead of requiring the user to select the file system and navigate to the file in a browser control.* • *Enabled better application logging including logging to the Sumo engine so that INX Software can better support clients who experience issues.* • *Enabled users to allocate a person to a SEG from within the Person Details screen on the SEG tab or Clinic Overview, as long as they have the relevant permissions.* • *Fix applied where documents linked to Inactive persons could not be downloaded and were listed as 'not found'.* • *Fix applied where Person Workgroup is not updated after the second save on the Person Details page.* • *Fix applied to where refreshing the Preview tab in Adhoc Reports may report an error in the Microsoft .NET Framework while trying to load assembly.* • *Fix applied where arrow disappears in Exposure Group Allocation when the user changes the page size to 50.* • *Fix applied to Medications and Medical Conditions pertaining to people who have never been involved in a Consultation were not showing on reports.* • *Fix applied to implementing a new INX InHealth instance would sometimes not correctly synchronise and encrypt the link to all persons from the INX Core database.*		

Protecting people & planet

INX +Process

5.10	5.11	5.12	5.13	5.14	5.15	5.16
Multi-level approvers *Implementing the ability to have:* • *From zero to four approver levels* • *Approvals in consecutive order* • *Can select an approver for that level, or allow anyone in that level to approve\Set approval group* • *First to approve pushes the workflow through to the next stage* • *Set approvers for a workflow to zero allowing you to skip that stage entirely* **Book manually** *The addition of a 'Book Manually' buttonin the commit stage of a Mobilisation, Change Roster/New Booking and Cancellation workflows.* *It is used to close out a request but not process the bookings within the workflow. This will be used by administrators who will be doing the booking directly in INX InFlight.* **Existing compliances** *When a traveller has a valid compliance and an attachment has been requested through site entry requirements, +Process will not stop the workflow as it now recognises this compliance has been achieved.* **Roster preview** *To allow Initiators to view an entire proposed request, we have added the short term booking to all roster previews.* **Product bug fixes and improvements include:** • *Delegate approvers fix*	**Custom Fields** • *Extended functionality to include custom fields. Custom fields set up in INX InFlight will now be visible through INX +Process. Clients can choose to turn these fields on/off.* • *Automatic updates of INX InFlight profiles upon workflow commitment.* **Product bug fixes and improvements include:** • *Performance update on the INX +Process person search page*	**Product bug fixes and improvements include:** • *Proposed line now shows when a booking goes over month end in the Change Roster Workflow* • *Ensure proposed line is displaying in the Cancel Bookings Workflow when the Start/Seed dates are in the future* • *Ad-hoc Room Bookings updated to remove on commit and flows into the Room Defrag in INX InFlight.* • *Update to duplicate profile error message* • *Ensure Employee ID maximum length of 20 characters is enforced on commit*	**Create Profile Workflow -** *Additional workflow which allows a profile to be created within INX InFlight can also be requested and deployed.* **Workflow Security** *A new security config has now been added next to the Role & Class Value in User Management. Enabling the User to have relevant security to specific workflow(s).* **Product bug fixes and improvements include:** • *In the Workflow > Search Person Profile component, the Date of Birth data now displays correctly when the server is in a different time zone.* • *In Workflow > Stage Summary, you can select any of the tabs when viewing the Stage Summary and then selecting the transition button, will no longer cause an error to display.* • *In Workflow > Person Details > Person Custom Fields where a special character has been used in the Label of the field, this will now render correctly.* • *In Administration > Delegation, you will now be able to delegate to another person with the same Role without restriction of the Class Value assigned.*	**No new features or bugs introduced in 5.14 release for INX +Process.**	**Auto delete draft workflows in bulk** *A system setting to remove draft workflows after a certain number of days has been added to this version of INX +Process.* *This removes the need for an administrator to open each individual workflow to remove it, rather the system will now remove the draft workflows automatically.* **Control number of days workflows appear in InTray** *A setting has been introduced to set the number of days to display the following workflow statuses in the InTray:* • *Committed workflows* • *Cancelled workflows* • *Declined workflows* *By default, the setting is 28 days, but this can be set to any number. A different number can be assigned to each status.* *After the number of days, the workflows in the statuses outlined above, will no longer appear in the InTray.*	**Warning messages added to INX +Process workflows** *Every worker needs to ensure where and when they're getting to site and this is a complex operation that needs to run smoothly. We have added a warning banner to INX +Process workflows so you can be alerted when booking a worker on another flight on the same day.* **Fix to pagination in Workflow Request search** *We have applied a fix to errors experienced in the pagination on the Workflow Request search page. You can now view all results of a search and navigate to the next page of the search results panel.* **Fix to refresh of Site Entry Requirements** *You can now retain data in the Site Entry Requirements stage on the Mobilisation Workflow. As long as your requirements are successfully saved before the page is refreshed, the data will be retained.* **Fix to Workflow Requests search results view** *You can now see the available columns in the Search Results grid on the Workflow Requests Page*
